Sai Surya Vamsi Sapireddy

CAREER SUMMARY

- Experienced AI Engineer with 5 years of expertise in building and deploying Generative AI (GenAI) solutions, developing large-scale AI applications, and optimizing cloud infrastructures. Proficient in leveraging top-tier AI models and tools, including OpenAI, Llama, Hugging Face, and Azure OpenAI, to create intelligent automation solutions, enhance data-driven decision-making, and streamline development operations.

Key Skills & Expertise:

- AI Models & Tools:
  OpenAI: Extensive experience in building AI-driven applications using GPT and other OpenAI models to enhance automation, NLP tasks, and intelligent decision-making across business processes.
  Llama Models: Applied Llama for efficient natural language processing (NLP) tasks, custom fine-tuning, and building intelligent agents for dynamic problem-solving.
  Hugging Face: Developed scalable NLP applications using Hugging Face's transformers, fine-tuning pre-trained models and implementing custom solutions tailored to organizational needs.
  Azure OpenAI: Expertise in integrating Azure's AI models for intelligent automation, natural language processing, and conversational AI applications.
  Microsoft Copilot Studio: Designed AI assistants like HR Assistant for employee engagement and multi-cloud operations management using Microsoft Copilot Studio.
  Streamlit & GenAI LLM: Built Multi-Cloud Assistant applications with Streamlit and GenAI LLMs, enhancing cloud operations and improving decision-making efficiency.
- **AI-Powered Tools**: Created development tools for streamlining software development operations, automating code generation, and enhancing productivity through AI integrations.
- **Cloud Platforms & Infrastructure**:
  AWS: Proficient with EC2, S3, RDS, Lambda, CloudFormation for cloud-based AI solution deployments.
  Microsoft Azure: Hands-on experience with AKS, ACR, Azure Monitor, Azure OpenAI, and ARM Templates for AI application deployments and monitoring.
- **Multi-Cloud Expertise**: Designed and managed AI solutions across multiple cloud platforms, ensuring high availability and scalability for cloud-based AI models.
- **AI Application Development & Deployment**:
  Model Deployment: Deployed custom and pre-trained AI models (OpenAI, Llama, Hugging Face) into production environments, optimizing them for scalability, performance, and accuracy.
- **Automation & Optimization**: Automated workflows and processes using AI-driven tools and scripts, reducing operational bottlenecks and improving efficiency across teams.
- Conversational AI: Developed AI-based assistants to automate interactions and enhance user experiences, focusing on policy query resolution and multi-cloud operations management.
- **Infrastructure as Code (IaC)**:
  Terraform, ARM Templates, AWS CloudFormation: Skilled in automating the deployment of cloud infrastructure using IaC, facilitating scalable, repeatable AI model and application deployments.
- CI/CD for AI Solutions:
  Jenkins, GitLab CI/CD, GitHub Actions, Azure DevOps: Developed and managed CI/CD pipelines for automated deployment and testing of AI models and applications, ensuring continuous integration and delivery.

- **Observability & Monitoring for AI**:
  Prometheus, Grafana, ELK Stack, Dynatrace, CloudWatch, Azure Monitor: Expertise in implementing monitoring solutions to track AI model performance, ensuring that deployed AI systems are efficient and reliable.
- **DevSecOps for AI Applications**
  SonarQube, Vault (HashiCorp), Azure Security Center: Implemented DevSecOps practices for securing AI applications, ensuring compliance with security standards and maintaining data privacy.

Notable Projects & Achievements:

- HR Assistant with Copilot Studio: Designed and deployed an AI-driven HR Assistant using Microsoft Copilot Studio and OpenAI models, resolving employee queries regarding company policies and enhancing operational efficiency.
- Multi-Cloud AI Assistant: Developed a Multi-Cloud AI Assistant using Streamlit, Hugging Face, and GenAI LLMs to streamline multi-cloud management and optimize cloud infrastructure operations.
- AI-Powered Development Tool: Built an AI-powered tool using OpenAI, Llama, and other LLMs to automate repetitive development tasks, enabling software development teams to focus on higher-value activities.
- Automated DevOps with AI: Leveraged GitHub Copilot and AI tools for automated code generation, improving development efficiency and reducing manual errors in the DevOps pipeline

TECHNICAL SKILLS

AI Tools	Open AI, Azure AI Search, GitHub Copilot, AWS Code Whisperer, Amazon Q, Copilot Studio, Google AI Studio, Transformers
Cloud Platforms	AWS (EC2, S3, RDS, Lambda, CloudFormation, CodePipeline, CodeBuild), Azure (AKS, ACR, Azure Monitor, ARM Templates)
Infrastructure as Code (IaC)	Terraform, ARM, AWS CloudFormation
CI/CD Pipelines	Jenkins, GitLab CI/CD, GitHub Actions, Azure DevOps
Observability & Monitoring	Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Dynatrace, CloudWatch, Azure Monitor

DevSecOps	SonarQube, Azure Security Center, Vault (HashiCorp)
Containerization & Orchestration	Docker, Kubernetes, EKS (Elastic Kubernetes Service), AKS (Azure Kubernetes Service)
Programming & Scripting	Python, Bash, PowerShell, YAML
Version Control	Git, GitLab, Azure DevOps
Networking & Security	VPC, Subnets, Security Groups, IAM, Cloud Firewall, SSL/TLS, Zero Trust Architectures

Company: ValueMomentum

Start Date: 09-12-2020

Sai Surya Vamsi Sapireddy

Cost Optimization	AWS Cost Explorer, Azure Cost Management, Spot Instances, Right-Sizing Recommendations
Platform Engineering	Backstage, Port

CERTIFICATIONS

- Microsoft DevOps Expert (AZ-400)
- Microsoft Azure Administrator - (AZ-104)
- Microsoft AI Fundamentals (AI – 102)
- Microsoft Azure Fundamentals - (AZ-900)

PROJECT SUMMARY

Project Name	Solutioning & Accelerators
Client Name	Value Momentum – Cloud Engineering Services
Duration	October 23 – Present
Role	Technical Lead
Technology Solution	OpenAI, Gemini, Hugging face, GitHub Copilot, LLAMA, Lang Chain, Microsoft Azure, Azure DevOps, Terraform, AWS

Sai Surya Vamsi Sapireddy

Responsibilities	• Extensive experience in building AI-driven applications using GPT and other OpenAI models to enhance automation, NLP tasks, and intelligent decision-making across business processes. **Llama Models**: Applied Llama for efficient natural language processing (NLP) tasks, custom fine-tuning, and building intelligent agents for dynamic problem-solving. **Hugging Face**: Developed scalable NLP applications using Hugging Face's transformers, fine-tuning pre-trained models and implementing custom solutions tailored to organizational needs. **Azure OpenAI**: Expertise in integrating Azure's AI models for intelligent automation, natural language processing, and conversational AI applications. **Microsoft Copilot Studio**: Designed AI assistants like HR Assistant for employee engagement and multi-cloud operations management using Microsoft Copilot Studio. **Streamlit & GenAI LLM**: Built Multi-Cloud Assistant applications with Streamlit and GenAI LLMs, enhancing cloud operations and improving decision-making efficiency. • Created development tools for streamlining software development operations, automating code generation, and enhancing productivity through AI integrations. • Conversational AI: Developed AI-based assistants to automate interactions and enhance user experiences, focusing on policy query resolution and multi-cloud operations management. • Terraform, ARM Templates, AWS CloudFormation: Skilled in automating the deployment of cloud infrastructure using IaC,
	facilitating scalable, repeatable AI model and application deployments. • Prometheus, Grafana, ELK Stack, Dynatrace, CloudWatch, Azure Monitor: Expertise in implementing monitoring solutions to track AI model performance, ensuring that deployed AI systems are efficient and reliable.

Project Name	FinOps & Governance Optimization
Client Name	Hudson Insurance
Duration	September 23 – October23
Role	FinOps Engineer
Technology Solution	Microsoft Azure, Azure DevOps, Power Bi, PowerShell, Azure Cost Management

Responsibilities	• Providing cost optimization techniques and actions to resolve the necessary resources. • Managing cloud infrastructure and application cost optimization. • Automating manual tasks using Azure logic apps, Power apps and Power Bi • Communicated across teams to handle production, quality, and customer usage • Worked closely with development teams through product lifecycles to consistency to meet infrastructure usage and cost • Contributed to sprint planning and retrospective meetings to support team efficient development processes.

Project Name	E-APPS, D2C (Direct to Customer), iLounge, VConnect, OEM and ACME DevOps
Client Name	Royal Sundaram
Duration	December-22 – August 23
Role	DevOps Engineer
Technology Solution	Microsoft Azure, Azure DevOps, Splunk, Docker, Powershell, AKS
Responsibilities	• Providing cost optimization techniques and actions to resolve the necessary resources. • Implementing CI/CD for applications using Azure DevOps and Jenkins • Managing cloud infrastructure and application issues. • Automating manual tasks using Azure logic apps, Power apps and Power Bi • Communicated across teams to handle production, quality, and customer issues
	• Troubleshoot issues and supported production with implementation and debugging concerns • Worked closely with development teams through product lifecycles to consistency to meet release deadlines • Managed SQL databases including writing queries and procedures for development and QA needs • Contributed to sprint planning and retrospective meetings to support team efficient development processes.

Project Name	BEAM and BAR DevOps, Environment and Production L2 Support
Client Name	GEICO
Duration	April'21 – Decemeber'22

Sai Surya Vamsi Sapireddy

Role	Senior Application Engineer
Technology Solution	Microsoft Azure, Splunk, Docker, Powershell, AKS
Responsibilities	• Providing cost optimization techniques and actions to resolve the necessary resources. • Communicated across teams to handle production, quality, and customer issues • Troubleshoot issues and supported production with implementation and debugging concerns • Worked closely with development teams through product lifecycles to consistency to meet release deadlines • Managed SQL databases including writing queries and procedures for development and QA needs • Contributed to sprint planning and retrospective meetings to support team efficient development processes.
